NOTE ON BIAS IN SAMPLE STATISTICS

Sample statistics of certain census tracts may be subject to substantial bias as the result of (a) under- or overenumeration in the sample, or (b) inadequate reporting of information for sample items. Among tracts with 1,000 inhabitants or more, there was one where one or more component ED's (comprising more than 20 percent of the total population of the tract) had allocation rates of 50 percent or more for a majority of the sample items. In tract 62, such ED's comprised 65 percent of the total population of the tract. The extent to which cancellation and replication of sample items may have affected the quality of sample tract statistics, however, has not been determined. Further information on editing procedures is available in the section on editing in the text of this report and that of chapters C and D of 1960 Census of Population, Volume I, Characteristics of the Population.
